New item available

Sheep Deck Chair

Holds sheep reliably in a relaxed position. Allows the use of both hands to trim feet, tag ears, examine and medicate. Benefits By using the deck chair, it allows you to use both hands for working on the animal. It also saves you from many backaches of trying to hold the animal and work on them at the same time. It will restrain heavily pregnant ewes without injury to them. It also allows you to walk away from the animal for more medicine or tools, etc.

Diatomaceous Earth

This product can be used as a post harvest treatment to control insects in stored grains like wheat, barley, oats, corn, beans and more).

Contact our store for more details.

August 31st is our Fiscal Year End. We would appreciate accounts to be current by this date. If you are new to B&L, there are several payment options:

Come in store and pay cash or cheque or Interac, Mail a cheque, Pay via your bank on-line through the Bill Payment option. Use your name as your account number (remember– no spaces or punctuation). Can't find us? Make sure to put spaces between the letters B & L.

If you'd like to pay via EFT (Electronic Funds Transfer) A password is required to finalize the payment here so, please call the office first.

How it Works

This system consists of a kite, which attaches to a 6 metre telescopic pole. The heart of the system is a bird-like raptor kite that always alters its flight (speed, height) on top of the pole. At the slightest breeze (less than 2km/h), it will take-off and fly randomly. It mimics the flight of a raptor such as a buzzard, or hawk, or falcon, and will intimidate the pest birds and defend your crops, fruit trees, garden, vineyard...

Unlike fixed scarecrow systems, the SCARYBIRD flies randomly, therefore pest birds will not get used to its presence because they see it as a hunting predator. The 6 metre height of the post is the minimum height for effectively

The SCARYBIRD Scarecrow device can cover an area of approximately 1.5 hectares.

The damages caused by pest birds are presenting serious problems to field crops, fruits trees, gardens, agricultural tarpaulins, vegetables crops...

If nothing is done to keep them away, birds can destroy an entire crop. These damages may represent significant losses for professional farmers or individuals.

Pest birds are numerous and current methods to protect against bird attacks are not always effective or can be harmful to the environment.

Traditional scarecrows are static and their efficiency is short-term, birds get used to them very fast; noise systems like gas guns are upsetting to close neighbours, and any type of chemical treatment has unacceptable consequences on the natural environment.
